

Capacity booking request in case of a downtime of the primary capacity platform or connected systems (backend)

The shipper concludes entry/exit contracts in the transmission network of OPAL Gastransport GmbH & Co. KG (hereinafter referred to as "OGT") via the PRISMA primary capacity platform (hereinafter referred to as "PRISMA") jointly operated by the transmission system operators. In case of a downtime of PRISMA or connected systems of OGT, shippers, which are already registered on PRISMA pursuant to Section 2a of the General Terms and Conditions for Entry-/Exit-Contracts of OGT (hereinafter referred to as "GTC"), are allowed to forward booking requests for day-ahead capacity in text form direct to the transmission system operator. In case of a downtime at the weekend booking requests have to be forwarded daily for the following gas das.

Booking requests within the downtime process can only be raised for interruptible capacities and will only be accepted, if sent to operations@gascade.de by using the standard form between 5 – 6 pm (local time). Requests for capacities on a firm basis will be processed as requests for interruptible capacities.

Furthermore, shippers have to prove that the capacity booking via PRISMA was not possible due to a downtime or other technical problems of PRISMA. For this purpose, shippers can among others refer to an actual Urgent Market Message of PRISMA or OGT or send a ticket, which was initiated by the IT-support of PRISMA.

The capacity will be allocated to the best of one's ability and without any guarantee taking into consideration the chronological order of all received booking requests. Processed bookings will be charged with the regulated tariff for interruptible day ahead capacities according to the currently valid price list of OGT.
